

» Your Data Will Double in Size This Year— Are You Prepared?

Optimize Your Operations with Our Storage Assessment and Design Services

It's a tough time for organizations and data—the amount of information you're generating is exploding while you're trying to do more with less. Plus, with tighter security regulations, records retention, and the need for better storage management, you are tasked with figuring out how to get a handle on your storage so it doesn't become an overwhelming burden. Add to that the new focus on server consolidation and virtualization strategies, and suddenly how and where you store and archive your data takes center stage. Not to worry, though—GovConnection is here to help you make sense of it all.

Ready to Plan Your Strategy?

Our Storage Assessment provides easy-to-understand information about your data growth and usage. We can help you make changes and improvements that reduce costs, shorten backup and recovery times, and accelerate performance and operational efficiency.

How a Storage Assessment Works

A GovConnection Storage Assessment uses an agent-less data collection tool that gathers information about your Microsoft Windows environment such as the rate of growth of your storage, file aging, file duplication, and file types. It also compiles information about your available storage space, wasted space, and storage inventory.

The Right Tool for Your Organization

This agent-less data collection method is both affordable and timely. The analyzed data offers valuable insights into the current state of your storage and gives GovConnection engineers the information they need to design a more efficient storage solution that best fits your environment and budget.

The finalized Storage Assessment Report includes information such as:

- Inventory of storage servers, arrays, and infrastructure

- Capacity analysis
- Storage usage and alerts
- File categorization data (by type, by most frequently used, by user, by age, etc.)

Your organization can use this data to:

- Measure total cost of ownership (TCO) and return on investment (ROI) expectations
- Make decisions regarding regulatory compliance and data retention
- Make immediate changes that reduce costs, shorten backup and recovery times, and improve operational efficiencies
- Strategically schedule follow-on projects like storage consolidation, storage virtualization, and tiered storage design and implementation

How to Get Started

1. We schedule a Storage Assessment discovery call led by a GovConnection services engineer.
2. We remotely install the agent-less data collection tool, and it runs for 30 days.
3. The tool generates detailed reports.
4. GovConnection engineers provide recommendations and present a final report.

We Also Design and Build Complete Storage Solutions

GovConnection engineers are certified and skilled at developing storage solutions that build efficiencies in your IT environment. Our engineers adopt a methodology of

Monitored Servers Summary

OS Type ▲	Total
Windows	50
Windows NT	10

Enterprise-Wide Summary

Type	Usage ▼
Disc Capacity	13,423,534,005,760
Free Space	7,900,848,970,752
Used Space	5,522,685,035,008
Unallocated Space	4,030,098,432
File Count	46,001,894
Directory Count	1,257,573
Users	2,944
Disk	103

Disc Utilization

assessment, design, implementation, and management for each unique customer environment. We can help build custom IT solutions for your organization, including:

Storage Consolidation

- Centralized storage management
- Advanced copy functionality
- More dynamic environment

Storage Virtualization

- Improve capacity utilization
- Heterogeneous storage management
- Improved storage migration

Tiered Storage

- Lower TCO
- Policy based management
- Rationalized data access
