Microsoft®

Microsoft Practice Services

» Exchange Services

Email is essential to operations. GovConnection can help you leverage your email by providing a range of Exchange implementation services. GovConnection's experienced engineers can help you plan and implement new Exchange environments, migrations from prior versions of Exchange, or migrations from other messaging platforms.

SharePoint Services

Microsoft SharePoint is a powerful portal that offers a way to streamline organizational processes, consolidate business intelligence on a shared platform, and create balanced ways of collaborating between departments, teams, partners, and colleagues. GovConnection engineers can conduct a SharePoint assessment to uncover your key operational drivers, short and long term security concerns, collaboration and workflow goals, and topology and performance issues.

Once the assessment phase is complete, GovConnection can work with you to plan and install your SharePoint infrastructure as part of our design, develop, and deploy methodology.

Windows Server Services

IT staffs are extremely busy supporting the enterprise, so one best practice for focusing their talents on mission critical activities is to offload time-consuming non-mission critical work where possible. GovConnection engineers can install and configure Windows Server 2008 to your specifications—including necessary patches, updates, and service packs. In addition, GovConnection engineers can migrate servers running previous versions of Windows Server to Windows Server 2008 to take advantage of Microsoft technology advancements.

Desktop Services

Planning to implement Windows 7 or Office 2010? Engage your GovConnection Account Manager to discuss a deployment assessment prior to your implementation. After the planning phase, GovConnection can manage and deliver the deployment to all the desktops in the enterprise.

SQL Services

Whether you're looking to implement SQL as a new database in your environment or updating your existing SQL infrastructure, our engineers can be an extension of your team and work with you to design and implement your SQL environment. GovConnection offers SQL migration services to help customers moving from other database environments and SQL Healthchecks to keep your existing SQL database running smoothly.

System Center Suite Services

The System Center Suite family of products allows your organization to utilize the data about your infrastructure—such as policies, best practices, and processes—to create automation and systematic management that reduces cost, improves application availability, and enhances service and support.

Bring GovConnection into your project to help, plan, design, and deploy your System Center environment. If your organization is migrating from SMS or MOM, work with our team of engineers to conduct a thorough Healthcheck prior to your migration to ensure System Center readiness.
