We Are Your HealthConnection™

When you're faced with opportunities and challenges, it's good to have a trusted partner at your side. HealthConnection brings together the best healthcare-focused technology products, making it easy to find IT solutions that help improve the quality of care and facilitate the seamless flow of information among patients, caregivers, and payers.

Available exclusively through the PC Connection, Inc. family of companies, our offerings are based on 6 key pillars of the total healthcare solution:

Compliance

Medical facilities utilizing Internet and IP-based applications are concerned about privacy, management, and liability. However, with proper attention and planning, patient data security and compliance—with regulations such as HIPAA and HITECH—are attainable and manageable. We can help you assess your current situation and implement privacy and security solutions that both you and your patients can trust.

Infrastructure

The focus on the adoption and meaningful use of the Electronic Health Record (EHR) and related financial incentives highlights the need for a powerful and flexible healthcare IT infrastructure. Whether the solution is server consolidation through virtualization, or increasing network bandwidth requirements for your Picture Archive Communication System (PACS), we will work with you to build, manage, and secure an infrastructure that will also accommodate future data growth.

A PC CONNECTION BRAND

The Right Partner Helps You Focus on Care

Mobility

Healthcare quality and safety initiatives have led to the emergence of technologies that enhance the sending and receiving of data while on the go. HealthConnection mobility solutions focus on manageability, security, and total cost of ownership. Let us help you plan, build, and implement wireless solutions that meet your current needs while providing a path for future expansion and upgrades. We can also help you assess your organization's vulnerabilities and strengths and achieve the acceptable risk level issued by your compliance officers or Institutional Review Board (IRB).

Point of Care

The number of tools available to physicians and clinicians to gather healthcare information at the point of care has greatly increased with the advent of mobility and safety initiatives. HealthConnection point of care solutions provide the most flexible and comprehensive options in this arena. Whether you need mobile medical carts, PDAs and tablets, barcoding, or RFID solutions, we can design innovative and effective solutions tailored to fit your environment.

Document and Image Management

As the healthcare industry moves toward meaningful use of the EHR, integration of digital documents and images becomes critical. It is also important to integrate the documents that originate from email, admissions, printed medical records, and the business office. HealthConnection document and image management solutions facilitate the capture, indexing, and archiving of items that exist outside your core applications—whether these are forms that need to be digitized or documents and images that need to be stored in a secure and retrievable environment.

Caregiver Collaboration

Delivering accurate and timely patient information to care providers is a primary tool in the journey to enhance efficiencies and improve patient outcomes. EHRs and related clinical applications that automate workflows and organize patient data are only the beginning. Advancements in digital imaging, unified communications, and mobility enable providers to collaborate effectively independent of physical location. HealthConnection can help you integrate IT tools into your patient care process to enhance communication and give your hands-on caregivers quick access to information—making it faster and easier to coordinate efforts and make treatment decisions.
