

Meaningful Use Requires Choosing the Right Devices for Your Clinicians

Get on the Right Path with Our Clinical Device Assessment Service

As U.S. hospitals move through the phases of the EMR Adoption Model, the ability to capture and manage patient data from intelligent medical devices will quickly become a necessity in order to advance patient safety and better clinical outcomes. You need to ensure that your caregivers have the most appropriate technology devices at the point of care. Our Clinical Device Assessment Service can help you get on the right path to meaningful use.

How Our Clinical Device Assessment Service Works

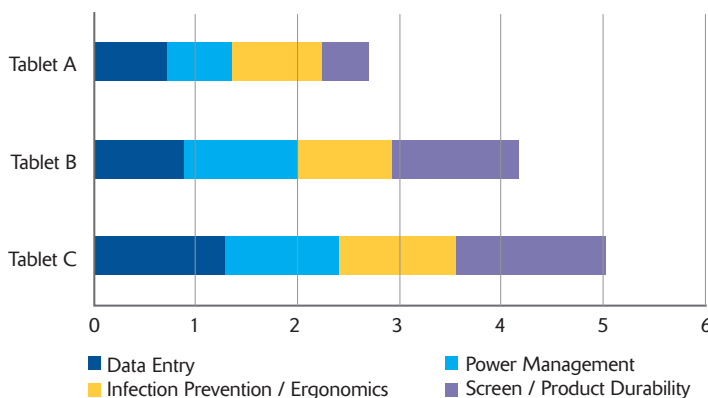

Our Clinical Device Assessment Service is an ideal way to refresh and deploy the technology devices required—including tablets, carts, handhelds, and barcode readers—to move your organization to the next stage of EHR meaningful use. Our simple 3-step process will guide you through an assessment of your current fleet, analyze your specific needs and workflows, and help you stage and execute a clinical device fair. Upon conclusion, you will have all of the information and tools necessary to select and support the right devices for your unique healthcare environment.

Move Closer to Meaningful Use in 3 Simple Steps

1. During an initial call to schedule your assessment, we will guide you through a review of your existing clinical devices, applications, and workflows. In addition, a recommended clinical workflow analysis will evaluate which types of devices best suit your unique needs. This includes compatibility with current IT systems and a project budget.
2. A certified HealthConnection representative will assist you in the coordination of a turn-key, on-site clinical device fair complete with product demonstrations, on-site vendor representation, and interactive survey tools* customized for the products you select.
3. After your clinicians have completed their evaluation of devices and the surveys are received, we will compile the data, analyze it, and provide you with a detailed report showing which devices your caregivers chose from each category, and why.

Overall Relative Ratings of Best Device

Clinical Device Assessment Service Deliverables

- Dedicated HealthConnection representative to assist in the coordination and execution of a clinical device fair
- Professionally developed surveys electronically delivered for your clinicians to evaluate and compare different devices at clinical device fair
- Detailed review and analysis of survey findings and solution proposal highlighting the recommended devices and services for your organization

*Survey content is created in collaboration with industry veteran, RN, and clinical informatics specialist. Survey structure and methodology is developed in partnership with the University of New Hampshire's Survey Center.
