

# Could Your Network Be in Danger?

## Uncover Weaknesses with a Comprehensive Security Assessment

Today IT organizations across all industries are faced with navigating a complex set of regulatory, compliance, and business demands. With ever-present security risks, business and technology evolution, and tightening regulations, security compliance can be difficult to achieve and maintain.

### Turn to PC Connection for Help

Data protection and privacy are driving organizations to keep all sensitive information safe from unauthorized disclosures and in line with legal, ethical, social, and business requirements.

Our Security Assessment can provide you with a better understanding of your organization's current security-focused infrastructure and present recommendations on how to meet the needs and challenges of the data security landscape.

We realize budgets are tight and that it's sometimes hard to determine where IT and security money should go. That's why our assessment helps you address compliance standards, identify the roots of current and/or possible future security breaches, and plan out future spending as it relates to what is critical for your business to succeed and operate legally and securely.

Our Security Assessment is powered by industry-leading toolsets focused on one, several, or all of the following areas based on your specific requirements:

#### Internet Security Assessment

- Penetration testing
- Vulnerability testing

#### Intranet Security Assessment

- Remote security dialup / VPN

#### VPN Assessment Services

- VPN vulnerability testing

#### Wireless Access Assessment

PC Connection works within the areas you identify and employs its unique data gathering methodology to help you:

- Document your current and future technology projects
- Document high-level solution feature/function requirements for your overall system
- Document security requirements for your overall system
- Document security policy requirements
- Document network availability/redundancy requirements for your overall system
- Determine customer support model and requirements for your overall system
- Determine high-level training requirements

Our Security Assessment is your first step to developing a 360° view of your network infrastructure and uncovering any security weaknesses. It also provides a mechanism for bringing your stakeholders together to identify strategic goals and focus on future business opportunities.
