## Get a Jumpstart on Desktop Virtualization with VMware View Manager

For organizations in need of a streamlined virtualization process, VMware's View Manager provides a painless way to centrally manage and deploy virtual desktops for end-users utilizing VMware Infrastructure.

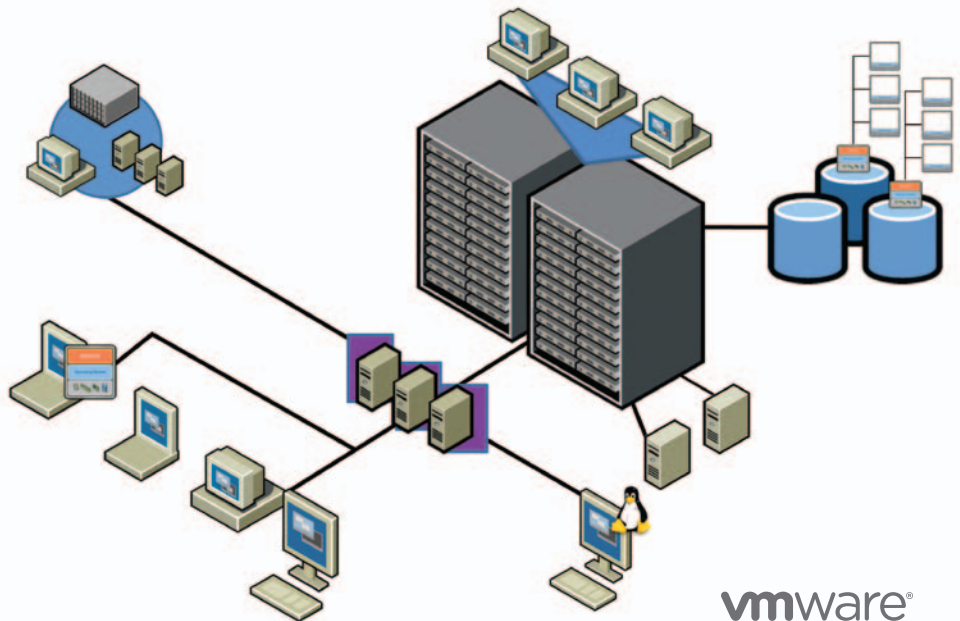

PCConnection's VMware View Manager Jumpstart program combines installation services with immersive training sessions to give your team the tools and experience they need. It delivers practical knowledge through a proof-of-concept setting, at your place of business. Much more than an installation, Jumpstart gives you the skills to optimize VMware View Manager for your own environment, including the expertise to overcome complexities and obstacles.

### How a Jumpstart Works

A VMware Certified Professional (VCP) consulting engineer conducts a 5-day workshop for up to 5 participants. The workshop involves the installation of VMware View and participants will receive strong knowledge transfer via hands-on experience and coaching by the consulting engineer. This workshop offers the chance to:

- Learn how to create desktop templates and centrally provision and manage virtual desktops
- Understand key VMware View Manager concepts including security, networking, and data center configuration
- Experience the benefits and cost savings obtained by using VMware View Manager

### SUMMARY OVERVIEW FOR VIEW MANAGER 4.5

### The Perfect Fit

PCConnection's Jumpstart training program offers quick and easy access to VMware View Manager's ability to reduce costs while promoting great IT control. It integrates easily with:

- Organizations already using VMware Infrastructure
- Those interested in delivering virtual desktops to end-users
- Customers concerned about rising desktop management costs
- IT administrators seeking to improve and maintain end-user satisfaction, security, availability, and performance
