Mac Client Active Directory Integration Service

Integrating the Mac into your organization can be effortless when you engage PC Connection for Professional Services.

 **Authorized Reseller**

Offering the Mac as a Standard Choice on Your IT Networks

While the Mac® has always been a part of certain departments, such as advertising and design, and a key platform in vertical industries, corporate buying of Apple® systems has increased in recent years. In many cases, they are becoming a standard option for organizations and enterprises.

If your organization is considering adopting Apple products as a standard computing platform, you'll want to plan to integrate them into your corporate network and your Active Directory environment. This will ensure all users remain monitored and supported, and their systems are tied to the policies governed by your directory services.

Mac Client Active Directory Integration Service

PC Connection's Mac Client Active Directory Integration Service provides you with the vital and necessary tools, information, best practices, and integration support necessary to plan and execute a successful Mac client integration project. Our Mac integration methodology will evaluate your current state and make the necessary recommendations on how to enhance your current environment. Then, we'll utilize the experience of our engineers to put the plan in place and facilitate a complete implementation.

Service Benefits:

Our Mac Client Active Directory Integration Service allows your organization to take advantage of an environment where your Mac users can:

- Utilize a single username and password
- Be managed in a single directory service
- Have access to network shares
- Be managed in the same manner as your PC users
- Eliminate the need for your IT staff to manage two directory services

Apple, the Apple logo, and Mac are trademarks of Apple Inc., registered in the U.S. and other countries.

Steps You Can Expect:

- Pre-flight review of Active Directory environment and Mac clients
- Pre-flight review of network and DNS setup
- Commence integration by binding Mac clients to Active Directory
- Finalize implementation and conduct knowledge transfer to your IT staff

How to Get Started

Mac Client Active Directory Integration Service Process

1. Contact your PC Connection Account Manager.
2. Your Account Manager will facilitate a call with your project leaders and our professional services team.
3. We will identify an individual project plan.
4. You will be on your way to a more streamlined environment with the integration of the Mac into your corporate network and your Active Directory environment—right alongside your PCs.
