

Networking PRACTICE

PC Connection™
we solve IT™

Our Expertise

PC Connection has qualified experts and experience building the right networking solutions for thousands of customers. Let our in-house experts help breathe new life into any network. Our services address network efficiencies, collaboration requirements, increased speed, and greater productivity. In-depth assessment, documentation, consultation, design, planning, installation, and management services are available for all networking solutions.

OUR MISSION IS TO CONNECT PEOPLE WITH TECHNOLOGY THAT:
Enhances growth » Elevates productivity » Empowers innovation

Network Architecture

A secure, reliable, and resilient network is an essential asset for any entity operating in today's technology-driven world. Let our experts help you define the right network architecture for your business, implement it according to proven practices, and tune it for the applications and traffic patterns that exist in your environment.

Network Assessment

Any network upgrade or expansion should start with a clear understanding of the capabilities and shortcomings of your existing infrastructure. Our Network Assessment identifies the equipment that should be upgraded and reviews performance issues such as bottlenecks. And if network issues are uncovered, we can provide remediation plans to fix the problems and optimize your network's performance.

Network Inventory Assessment

Get a comprehensive discovery of your IT network, documentation of its current state, and a performance analysis for each appliance. Any rapid network expansion, or newly acquired or merged networks, has likely left you faced with uncertainty about how each asset fits into your overall infrastructure. This is the holistic view you need. Our Network Inventory Assessment is a comprehensive documentation of your IT network. It offers a detailed hardware and software lifecycle analysis, as well as network performance investigation. We'll highlight any potential problem areas and provide immediate resolution for most network performance issues.

Network Access

Simplify with one network, one policy, and one management architecture. Our team of experts will take a holistic approach and design a network that provides wireless access that performs like wired and effectively supports the policies that enable BYOD. Policy-driven, on-demand access will ensure system security is retained. And network access by definition implies control of your network, so built-in security layers will ensure admittance is regulated.

Collaboration

The social, mobile, collaborative world is upon us. Regardless of job function, organization, or industry, technologies to maximize your efficiency and ability to remain engaged are essential. Our Network Practice team has guided organizations through the careful selection of the right unified communication and collaboration technologies that drive these innovative efficiencies. Take the journey with us to find new ways to uncover and act on information that is often scattered across your organization.

Video Assessment

We help determine if your network is ready to support the real-time traffic and Quality of Service (QoS) necessary for applications. This service identifies network weaknesses and includes recommendations to ensure your IT dollars produce maximum ROI while delivering high levels of performance.
