

# Networking PRACTICE

PC Connection™  
we solve IT™

## Our Expertise

PC Connection has qualified experts with experience building the right networking solutions for thousands of customers. Let our in-house experts help you build out a complete IT infrastructure with a solid foundation. Our services address network efficiencies, collaboration requirements, increased speed, and greater productivity. In-depth assessment, documentation, consultation, design, planning, installation, and management services are available for all networking solutions.

OUR MISSION IS TO CONNECT PEOPLE WITH TECHNOLOGY THAT:  
Enhances growth » Elevates productivity » Empowers innovation

### Network Architecture

A secure, reliable and resilient network is crucial for any entity operating in today's technology-driven world. Our Network Practice can help you develop a clear understanding of the capabilities and shortcomings of your existing infrastructure and chart a plan for remediation. We'll work with you to:

- understand your existing network infrastructure
- find new ways to expand capabilities
- leverage your current investments.

Rapid network expansion, newly acquired or merged networks, may leave you with uncertainty about your overall environment. We can dig deep into your infrastructure with a comprehensive discovery of your IT network, document its current state, and conduct a performance analysis for each appliance for a holistic view. We help identify the equipment that should be upgraded and review performance issues, such as bottlenecks.

Once issues are uncovered or known issues are identified, we provide remediation plans to fix the problems, optimize your network's performance, and increase your network capabilities. Let our experts help you define the right network architecture for your business, implement it according to proven practices, and tune it for the applications and traffic patterns that exist in your environment.

### Network Access

Network access can be simplified and secured with one network, one policy, and one

management architecture. Our experts will take a holistic approach to design a network that provides wireless access, performs like wired, and effectively supports the policies that enable BYOD. Our Networking Practice works closely with our Security Practice to create policy-driven, on-demand access solutions with built-in security layers and will help you not only optimize your environment and resolve capacity issues but also include security measures across all domains.

### Collaboration

The social, mobile, collaborative world is upon us. Regardless of job function, organization, or industry, technologies to maximize your efficiency and ability to remain engaged are essential. Our team has guided organizations through the careful selection of the right unified communication and collaboration technologies that drive innovative efficiencies. Take the journey with us to find new ways to uncover and act on information that is often scattered across your organization.

We will work together with you to unify voice and video across your organization and build upon the existing foundation of your network infrastructure. We can also help you understand how to expand your existing network footprint to support the use of video and determine if your network is ready to support the real-time traffic and Quality of Service (QoS) necessary for these types of applications. We'll identify network weaknesses and remediate the issues to ensure your IT dollars produce maximum ROI while delivering high levels of performance.
