Cloud PRACTICE

PC Connection
we solve IT™

Our Expertise

PC Connection has qualified experts with years of experience who provide a personalized engagement with customers to build the right hybrid and public cloud solutions. Our team helps you discern the factors that should drive the identification and prioritization of providers that can best host your workloads. Combine the attributes of public cloud capacity with high performing network connectivity and the option to co-locate legacy or proprietary hardware, and optimal possibilities evolve. That's where our team excels—we give you options for delivering a next-generation IT strategy.

OUR MISSION IS TO CONNECT PEOPLE WITH TECHNOLOGY THAT:
Enhances growth ❯❯ Elevates productivity ❯❯ Empowers innovation

Cloud Storage and Disaster Recovery

With an on-premises data center connected to the storage pools or replication services of a public cloud provider, you get a tiered and resilient data protection strategy. Whether your goal is redundancy, primary off-site storage, or a new storage pool for the delivery of a new application, our team will design a solution to accomplish every facet with one of our many public cloud storage partners.

Desktop as a Service (DaaS)

Don't be intimidated by the idea of mobile workforce computing solutions powered by VDI technology. We will simplify it for you. Our team can help you identify the best platforms, approach, and implementation strategy to put the power of hosted desktops to work for your users.

Unified Communications as a Service (UCaaS)

Any technology adopted over the past two decades is now obsolete or will be very soon. The traditional PBX phone system is a perfect example. As organizations seek to replace their aged communication infrastructures, they quickly realize that new ways of delivering telecommunication technology can enhance employee productivity and the customer experience. Our cloud team can guide you through the transition. Let us guide the process to evaluate and implement a hosted UCaaS solution that will meet your unique needs.

Infrastructure as a Service (IaaS) and Platform as a Service (PaaS)

Any organization on a path to fully migrate to the cloud or a new platform to build their next application must make critical decisions. It begins with consideration of the SMAC stack (social, mobile, analytics, and cloud). Our team is well versed in this area and prepared to help navigate the factors that will lead to proper selection—the right architecture and the most appropriate provider.

Connectivity

To develop and implement a connectivity strategy that provides your organization's users and applications with the bandwidth and redundancy to keep the business running is a daunting task. Couple that challenge with the ability to keep costs under control and manage the network interface effectively, and you face a substantial challenge. Our team has helped customers design resilient, cost-effective networks regardless of environment size or requirements. Put our knowledge to work for your organization.

Co-location

Co-location can provide you with additional or alternate space in which to run your most critical workloads. Our tier 3 co-location data center providers can deliver high fidelity data center capacity through managed data center services for your equipment. Need a better, safer, and more resilient environment? We can help you find the right facility in the right location to meet your needs.
