

Converged Data Center PRACTICE

PC Connection™
we solve IT™

Our Expertise

PC Connection has qualified experts and experience implementing a breadth of data center solutions for customers of all sizes across diverse industries. Our Converged Data Center Services make it easy to adopt and implement the industry's highest performing infrastructure technologies to keep data centers running efficiently and effectively. Resources can be allocated and used based on analytics whereby workflows and workloads are directed to best serve the business need at any particular point in time. When optimized, organizations can attain new levels of agility and flexibility across all domains of the data center including servers, virtualization, and storage. This is the era of the software-defined data center, and our team can help you realize both the vision and the benefits.

OUR MISSION IS TO CONNECT PEOPLE WITH TECHNOLOGY THAT:
Enhances growth » Elevates productivity » Empowers innovation

Private and Hybrid Cloud

An on-premises virtualized data center, built by your organization and run by your organization, can be upgraded into a private cloud environment. A true private cloud environment builds from traditional server virtualization and offers distinct attributes of cloud models: pools of compute resources, broad access to data, rapid scalability, self-service provisioning, and the ability to measure usage. Integrate that capability with an off-premises, hosted cloud solution, and organizations can benefit from expanded resource pools for burst, proximity, and budgetary benefit.

Converged Infrastructure

Integrated server, storage, networking, and virtualization platforms are emerging as the modern option for maximum performance and cost efficiency to address today's demanding workloads. Let our team lead you through the planning, integration, and guide the implementation of one of these high-performance platforms to better serve your business.

Data Protection and Business Continuity

Insulate your business and your customers from technology failures, natural disasters, and unplanned outages before you have to recover from an unexpected event. Our experts will design a world-class business continuity plan

to keep your most critical systems and workloads available even when disaster occurs. Our team can help you assess the factors to consider how to design your plan and the best technology to implement to achieve continuity in your systems and more importantly, your business.

Enterprise Disk Arrays and Storage Networking

An organization's data is one of its most valuable assets. The need for efficient, reliable, and cost-effective storage solutions has never been greater and our team of experts can ensure that you leverage the right storage tiering, classification, and investments to fuel your infrastructure with the data it needs to operate. Whether you want to build a new storage environment or add to an existing one—we can help.

Server and Desktop Virtualization

To develop and roll out a virtualization strategy that helps you maximize data center efficiency and user satisfaction simultaneously is a monumental challenge. Our team of experts has implemented virtualized data centers for customers of all sizes and with widely varied requirements. Whether you start with our virtualization workload assessment, adopt end user computing virtualization, or pursue a software-defined data center vision—let our experts lead you with strategies proven to maximize your investment.
